

# division STRATEGIES

1. Use your multiplication facts and fact families.

$$28 \div 7 = ?$$

I know that  $7 \times 4 = 28$  so  $28 \div 7 = 4$

2. Use skip counting.

$$30 \div 5 = ?$$

5, 10, 15, 20, 25, 30 That is 6 fives so  $30 \div 5 = 6$

3. USE REPEATED SUBTRACTION.

$$18 \div 6 = ?$$

$$18 - 6 = 12 - 6 = 6 - 6 = 0$$

6 COULD BE SUBTRACTED 3 TIMES SO  $18 \div 6 = 3$

4. Draw a picture.

$$12 \div 4 = ?$$

There are 12 in all and 4 groups.

After I passed out the 12,  
I can see 3 in each group so  $12 \div 4 = 3$
